Recent positions

University of California, Los Angeles, Los Angeles, California USA

Assistant Professor

July 2020–Present

Departments of Computational Medicine and Human Genetics. We aim to understand gene regulation by building broadly applicable computational tools to analyze high-throughput genomic assays. This approach works by carefully investigating the experimental design and developing data-driven models using computer science and high-dimensional statistics to advance biomedical discovery.

Stanford University, Stanford, California USA

Postdoctoral Researcher

August 2016–June 2020

Professor Jonathan Pritchard Lab. Interested in RNA expression, splicing, regulation, and how genetic variation affects those, thus resulting in disease. Focused on statistical and algorithmic method development in: intron retention QTL mapping, modeling of targeted perturbations, network-guided trans-eQTL mapping. Additionally, ongoing collaboration with Prof. Hiten Madhani (UCSF) on developing statistical techniques for modeling conservation of methylation in highly repetitive regions (e.g. centromeres) in species *C. neoformans*.

Education

University of California, Berkeley, Berkeley, California, USA

Ph.D., Computer Science

August 2010–August 2016

- Advisor: Prof. Lior Pachter
- Thesis: **Fast and accurate quantification and differential analysis of transcriptomes.**
- Thesis committee: Haiyan Huang, Lior Pachter, Nir Yosef
- Qualifying exam committee (May 2014): Doris Bachtrog, Haiyan Huang, Lior Pachter, Nir Yosef
- Graduated with Designated Emphasis in Computational and Genomic Biology
- Specialization: Computational biology, (bio)statistics, machine learning
- Supported by NSF Graduate Research Fellowship Program (2011–2014)
- Supported by GAANN fellowship, and Academic Excellence Award (2010–2011)

M.A., Statistics **December 2013**

- Advisor: Prof. Haiyan Huang
- Specialization: Applied statistics
- Thesis: **Biclustering as an application of sparse canonical correlation analysis with RNA-Seq applications.**
- Thesis committee: Peter J. Bickel, Haiyan Huang, Lior Pachter

California State University, Fullerton, Fullerton, California, USA

B.S., Computer Science **August 2005–May 2010**

- Specialization: Scientific computing
- Minor: Mathematics
- Graduated with summa cum laude

Previous employment

University of California, Berkeley, Berkeley, California USA

Research Assistant

October 2010–July 2016

Professor Lior Pachter Lab. Developed computational and statistical methods for analyzing mRNA-seq data. Work included: differential expression coupled with transcriptome abundance estimation, fast transcriptome mapping, splicing analysis of terminal erythropoiesis with experimental collaborators, identifying incorrect gene annotations, and visualizing fragment alignments. Also the system administrator for the group.

Research Assistant

June 2013–July 2016

Professor Haiyan Huang Lab. Developing methods for biclustering of linear expression patterns by sparse canonical correlation analysis. Our method generalizes many existing biclustering methods.

10X Genomics, Pleasanton, California USA

Computational biology intern

May 2014–August 2014

Using statistical and machine learning techniques (MART, GLM) to analyze biological sequencing data from a novel sequencing platform. Also helped develop analysis pipelines in Python and R.

California State University, Fullerton (CSUF), Fullerton, California USA

Research Assistant

December 2007–May 2010

Professor Spiros Courellis Lab. Shake&wARP electron density map refinement research project. Deployed a distributed and parallel computing environment used for Phase Bias Removal in Macromolecular Crystallography. Developed new techniques for alternative electron density maps, including new methods to cluster maps returning and aggregating maps.

Massachusetts Institute of Technology, Cambridge, Massachusetts, USA

Summer Research Intern

June 2009–August 2009

Professor David Gifford Lab. Developed and implemented a method for determining the affinity of transcription factors to specific repetitive element families in ChIP-seq. Application was used to test the affinity of Retinoic Acid Receptor to ALU repetitive elements.

Thales Raytheon Systems, Fullerton, California USA

Information Solutions Intern

May 2007–May 2008

Provided reliable, innovative, effective, and efficient computing infrastructure to employees. Tasks included support for PGP Encryption, server monitoring, system administration, etc.

Funding and Fellowships

Albert P. Sloan Fellowship Computation and evolutionary molecular biology (\$75K)	September 2021–August 2023
HHMI Hanna H. Gray Fellowship Transitional award (Postdoc to PI; \$1.4M over 8 years)	September 2017–July 2024
NIH Supplement to Promote Diversity in Health-Related Research	November 2016–September 2017
NSF Graduate Research Fellowship Program (GRFP)	August 2011–May 2015
NIH Maximizing Access to Research Careers (MARC) Scholar	June 2008–May 2010

(January 2009; Poster Presentation)

Selected Honors and Awards

FASEB MARC Travel Award for ISMB 2014	August July 2014
FASEB MARC Travel Award for ISMB 2011	August July 2011
Graduate Assistance in Areas of National Need (GAANN) Fellow	August 2010–May 2011
Boeing Dean’s Scholarship	April 2009–2010
“Outstanding poster presentation in Computer Science” at SACNAS Conference	October 2009
Southern California Auto Scholarship	August 2008–2009

Open source software

Academic:

- sleuth (2015–present) - Transcript level differential expression with uncertainty estimation (R)
<https://github.com/pachterlab/sleuth>
- kallisto (2015) - Near optimal RNA-Seq quantification (C++11)
<https://github.com/pachterlab/kallisto>
- Keep Me Around (2015) - Intron Retention Detection and Analysis (R)
<https://github.com/pachterlab/kma>
- Fast SCCA (2014) - Implementation of SCCA using the NIPALS algorithm (C++, R)
<https://github.com/pimentel/fscca>
- TopHat (2011) - Modules for transcriptome mapping since version 1.4.0 (C++)
<http://ccb.jhu.edu/software/tophat>

Non-academic:

- vim-slimeblocks (2018) - Send R/python code to tmux sockets
<https://github.com/pimentel/vim-slimeblocks>
- atom-r-exec (2016) - Send R code to various R consoles from the Atom editor (CoffeeScript)
<https://github.com/pimentel/atom-r-exec>
- Other code can be found at <http://github.com/pimentel>

Computer Skills

- Languages:
 - Proficient: R, C++, Python
 - Competent: JavaScript, SQL, Bash
- Voice recognition for general input and software development
- Several other “retired” languages which I haven’t used in a while, but was once fluent in: csh, Java, Perl, MATLAB, Fortran
- Unit testing
- System administration in Linux/UNIX
- Tools: Git, Vim, CMake, Make, Snakemake, Subversion, OpenPBS/Torque

Professional Affiliations

Member of Stanford Latinx Postdoc Association (June 2017–June 2020)

Member of Berkeley Science Network (January 2013–July 2016)

President for Association of Computing Machinery, CSUF Chapter (August 2009–May 2010)

President of the Omicron (CSUF) chapter for Upsilon Pi Epsilon, international computer science honor society (January 2008–May 2009)

Vice President for Association of Computing Machinery, CSUF Chapter (January 2008–May 2009)

Member of Orange County Linux Users Group as well as UNIX Users Association of Southern California (June 2007–May 2010)

Teaching

Designing and leading the Think-Pair-Share (TPS) seminar series at UCLA (collaboration with Noah Zaitlen, Brunilda Balliu, and Paul Boutros). We pair students randomly such that junior students are paired with senior students and they discuss a paper together. After their paired discussions, we discuss the paper as a group and generate a list of questions for the authors. Finally, the list of questions is sent to the authors who then give a nonstandard seminar offering context to the paper and answering questions. This project is currently active and under development. (Fall 2020)

GSI for “Introduction to Statistical Computing” (STAT 243). Main course taught by Chris Paciorek. (Fall 2015)

GSI for two sections of “Structure and Interpretation of Computer Programs” (CS 61A). Main course taught by Professor John DeNero. (Spring 2015)

Students

Sandy Kim (UCLA masters thesis; September 2020–Present) is working on experimental design of *in vivo* high throughput CRISPR screens.

Jingyou Rao (UCLA undergraduate thesis; September 2020–Present) is working on models for heritability of RNA isoform expression.

Ashwin Ranade, Jingyou Rao, and Yiwen Chen (UCLA BIG Summer undergraduates; June 2020–August 2020) worked on benchmarking eQTL gene expression pipelines and heritability of RNA isoform expression.

Mentoring

Alex Tseng (Undergraduate; August 2015–August 2016) worked on improving effective length estimation in RNA-Seq transcript quantification in *kallisto*.

Pascal Sturmfels (Undergraduate; August 2015–May 2016) worked on improving the memory usage of *sleuth* so that sleuth objects can be shared easily for easier reproducibility and accessibility.

Diego Alcantar (Undergraduate; September 2015–May 2016) worked on integrating pathway analysis into *sleuth*.

Daniel Li (Undergraduate; August 2015–December 2015) worked on implementing visualizations for principal component analysis loadings and bias parameters in *sleuth*.

Grace Christenberry (SUPERB visiting undergraduate; May 2011–August 2011) worked on implementing a visualization tool for Cufflinks bias estimation parameters.

Workshops

“Differential expression analysis with Sleuth.” *Kallisto-Sleuth workshop at UC Berkeley*. Hosted by Laboratory of Mathematics and Computational Biology (2016). Slides at <https://pachterlab.github.io/kallisto-sleuth-workshop-2016/>

“Algorithms for RNA-Seq” *iPlant workshop at UC Davis*. Hosted by iPlant Collaborative (2015). Video at <https://youtu.be/96yBPM81Et8?list=PLlFNmoa-yUIb5cYG2R1zf5rtrQQKZvKwG>

“Algorithms for RNA-Seq” *RNA-Seq for the Next Generation*. Hosted by Cold Spring Harbor Laboratory (2015). Slides at <http://www.rnaseqforthenextgeneration.org/>

“eXpress transcript quantification” **Seq I Workshop*. Hosted by Laboratory of Mathematics and Computational biology (2012). <http://lmcb.wikispaces.com/eXpress+Walkthrough>

“Sequence alignment” *RNA-Seq workshop*. Hosted by Computational Genomics Resource Laboratory (2011). <http://cgrlucb.wikispaces.com/Sequence+alignment>

Outreach

Speaker at Stanford’s Grant Writing Academy Postdoctoral Fellowship workshop (Fall 2017, 2018, 2019)

Invited speaker to Caminos a las Ciencias (CALC) at St. Mary’s College (Fall 2018)

Mentor through First-generation or Low-Income (FLI) Community Mentoring Program at Stanford (Fall 2016)

Mentor to two students at Bay Area Graduate Pathways Symposium at UC Berkeley (Fall 2015)

Presentations to biology and statistics classrooms at La Mirada High School on computational biology (Spring 2014)

Mentor to summer research intern through SUPERB program at UC Berkeley (Summer 2011)

Mathematics, Engineering, Science Achievement (MESA) Robotics Workshop (April, May 2009)

Hobbies

Fountain pens and calligraphy, road and mountain cycling, bicycle mechanics, hand tool woodworking.
